AUXO

RESEARCH-GRADE PORTFOLIO SIMULATOR

Stop guessing. Start simulating.

Most financial projections show you a single line — a best guess dressed up as certainty. Auxo runs thousands of independent market scenarios so you see the full range of outcomes: the likely path, the best case, and where things go wrong. Decisions grounded in real probability, not assumed averages.

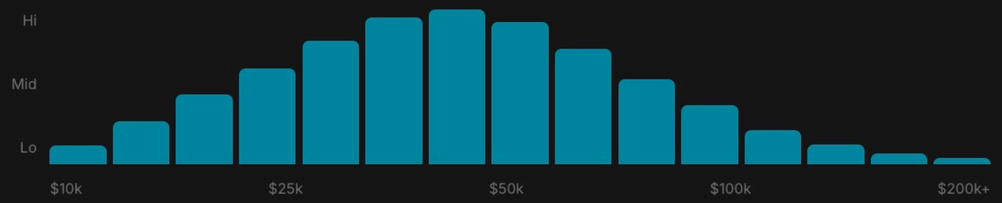
Run a Simulation

Read the Methodology

EXAMPLE OUTPUT

$10,000 initial — 30 year horizon

7% expected annual return · 15% volatility



Final portfolio value · frequency of outcomes

Simulations run	10,000
Median 30-yr return	+347%
90th percentile	+892%
10th percentile	+61%
Probability of loss	4.2%
