Run a Simulation

Set your parameters and simulate 10,000 possible market futures.

Simple | Risk Analysis

PRESET SCENARIO

Early Retirement

Initial Investment $25,000

$0 — $100,000

Monthly Contribution $1,500

$0 — $5,000

Time Horizon 25 years

5 yrs — 40 yrs

Investment Type

Conservative 5% avg | Moderate 7% avg | Aggressive 10% avg

Adjust for Inflation

Shows real purchasing power

Set a goal

Target portfolio value — we'll show the probability of reaching it across all 10,000 paths.

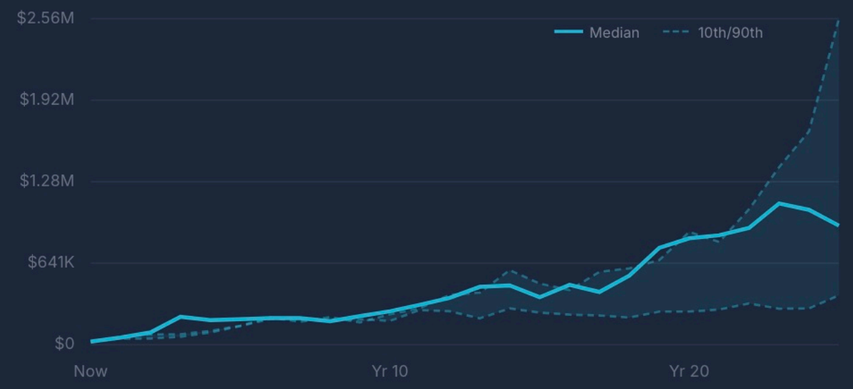
$ 500000

Run Simulation

Median Outcome	Best Case	Worst Case	Chance of Reaching Goal
$935K	$2.56M	$388K	81.2%
50th percentile	90th percentile	10th percentile	$500,000

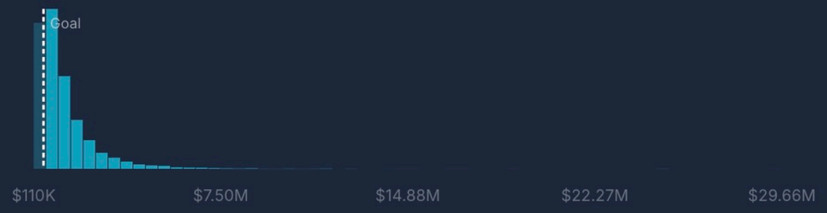
Portfolio Growth Paths

Representative simulation paths nearest the 10th, 50th, and 90th percentile terminal values.



Distribution of Outcomes

Final portfolio values across all 10,000 simulations. Bright bars show simulations that reached your goal.



Geometric Brownian Motion · 10,000 paths · monthly stepping · 3% inflation adjustment
